

### Green Roof Plants

- Coral Carpet Sedum** (*Sedum album* 'Coral Carpet', USDA Hardiness Zones 6-9) - The white-flowered sedum reaches 4 inches high, spreads to 8 inches, and has greenish-red foliage that turns dark coral in winter.
- Angelina Stonecrop** (*Sedum rupestre* 'Angelina', Zones 3-11) - The golden spruce-like foliage turns shades of orange in winter, and plants reach 3-6 inches and spread to 12 inches.
- Kelp Forest Stonecrop** (*Sedum* 'Kelp Forest', Zones 4-9) - Soft mounds of sprucey leaves can reach 6 inches and spread to 18 inches.
- Tasteless Stonecrop** (*Sedum sexangulare*, Zones 5-8) - Is more tasteful than its name suggests. The fine, low-growing evergreen spreads quickly to form an attractive mat of fine foliage. Starry yellow flowers appear in late spring or early summer.
- Rolling Hens-and-Chicks** (*Sempervivum globiferum* ssp. *allionii*, Zone 5-9) - Rolling Sempervivums create lots of offsets and spread. Electric green rosettes that develop red-flushed tips in winter make this variety extra pretty.
- Histoni Rolling Hens-and-Chicks** (*Sempervivum globiferum* ssp. *hirtum* 'Histoni', Zone 5-9) - Bright green rosettes tipped in cherry red give this rolling hens-and-chicks bright color that deepen in the winter.

### Complementary Black Gold® Potting Soil

- Black Gold Just Coir
- Black Garden Canadian Sphagnum Peat Moss
- Black Garden Perlite
