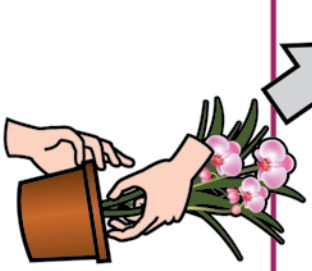
How to Use Black Gold® Natural & Organic Orchid Potting Mix

1 Choose Container: When planting your orchid, select a container slightly larger than the old. Make sure it has drainage holes and a bottom saucer to catch water. Cover large drainage holes with a piece of screen or pebble layer for mix retention.

2 Transfer: Carefully tip and remove the orchid from its old container, keeping its root ball intact. If plants are pot-bound, gently loosen the roots for better soil-to-root contact.



3 Planting: Add a layer of mix at the bottom of the new container, leaving space for your orchid. Center the plant, and fully cover the roots with fresh mix, leaving a 1-inch space at the top for watering. Gently press the mix down and brush excess away from stems or leaves.

4 Watering & Feeding: Water until the bottom saucer is filled. Monitor soil-moisture levels, and water once the mix feels dry down to a 1-2-inch depth. For better growth and flowering, feed regularly with a fertilizer formulated for orchids. Follow manufacturer's recommendations.

5 Growing Environment: Know the light, temperature, moisture, and humidity requirements of your orchids. Provide the best growing environment for their needs.
